

ENGLISH-SPANISH LOCALIZATION & QA ANALYSIS

Neutral Latin American Spanish | U.S. Hispanic Market

Business Objective

Review and improve 75 customer-facing English-Spanish translations for a fictional U.S. digital commerce company, ensuring accuracy, terminology consistency, professional tone, and natural localization.

QA Results

Key Findings

- Naturalness was the most frequent issue, accounting for **23 corrections**.
- Terminology inconsistencies accounted for **11 corrections**.
- 5 tone/register issues** were identified, primarily inconsistent use of *tú* and *usted*.
- Customer Support required corrections in **87.5%** of reviewed strings.
- Functional placeholders such as {order_number}, {date}, and {email} were preserved throughout QA.

Localization Approach

Established a neutral Latin American Spanish style using a professional *usted* register, standardized recurring e-commerce terminology, corrected literal translations and unnatural phrasing, and maintained functional formatting and placeholders.
